

ELECTRON Fe

IONIC IRON

Ideal for plants with sensitivity to iron deficiency such as gardenias, lemon trees, orange trees, etc.

BIO - suitable for use in organic farming, agriculture, in accordance with the requirements of Reg. EC 848/2018 & 1165/2021

FOR AMATEUR USE

SOIL IMPROVER

QUARANTEED COMPOSITION:

- Iron (Fe): 114 ppm

- Sulfur (S): 66 ppm

DESCRIPTION: ELECTRON Fe is a liquid and acid-reactive iron formulation in ionic form. Its innovative technology allows the iron ions to remain stable and bioactive until they are fully absorbed by plant tissues.

The main characteristic of ELECTRON Fe is its good penetrating capacity when sprayed on the foliage of plants, directly and significantly increasing the iron content of plants. It does not stain or dye the sprayed plants.

ELECTRON Fe is used to prevent and treat iron deficiency in plants, known as midrib chlorosis. This is common in alkaline and calcareous soils with high pH ($\text{pH} > 7.5$), in very acidic and very light, sandy soils or in soils very poor in organic matter.

The use of ELECTRON Fe directly provides iron, activates chlorophyll production, and intensifies photosynthesis. ELECTRON Fe will green up the color of older chlorotic leaves, while new leaves that grow after the intergrowth application will not be chlorotic.

METHOD AND TIME OF APPLICATION: ELECTRON Fe is applied to all your plants, horticultural, ornamental, fruit, citrus, kiwi, vines, olives, pomegranates, turf during vegetative growth.

Apply by foliar spraying, with an even and uniform wetting until run-off throughout the year.

Repeated applications may be required.

PRECAUTIONS: - Away from children. - Wash hands thoroughly after handling. - Avoid release into the environment.

Poison Centre Telephone: 1401

STORAGE CONDITIONS:

Store in its packaging, at a temperature above 0°C, in an enclosed store, protected from extreme temperatures, fire and moisture.

SHAKE WELL BEFORE USE
