

To Fight
larvae & nymphs
mosquitoes.

ΥΜΦΗ

Liquid ready to use

NO PRODUCT DESCRIPTION
NYMΦH AS A LIVESTOCK PRODUCT

It is not a biocidal product

NEW

NYMΦH is an innovative product that used in stagnant
and swampy waters for the control of larvae
and mosquito nymphs.

ACT WITH NATURAL AND MECHANICAL WAY

NYMΦH acts in a natural-mechanical way, ensuring effectiveness
against mosquito larvae & nymphs for up to 4 weeks. It is based on
fast biodegradable vegetable oil and is free of silicone. It does not
contain insecticidal active substances.

NYMΦH product does not contain biocidal active
substances in its composition.
Based on the description of the mode of action, this product
prevents the mosquito larvae from breathing and the eggs
from the female mosquitoes from depositing on the surface
of the water, due to the creation of a natural barrier in the
water.

The product can be applied manually or using a
suitable mechanical or hydraulic sprayer.

Dosage: Apply 1ml of product (approximately 20-25
drops) to each square meter of standing water surface.
In cases of water with heavy organic load (swamps,
septic tanks, etc.) the dose can be increased to 5ml of
product depending on the amount of load.

First aid measures: In case of ingestion consult a
doctor and treat accidentally. In case of contact with
eyes, rinse immediately with plenty of water.

Warnings: Avoid swallowing. Keep it away from
children and pets. Read the label before use. Do not
use it in excessive or inappropriate amounts. Avoid
eye contact. Avoid contaminating food, beverages or
containers containing them while using it. After use
and in case of accidental contact, wash thoroughly
with soap and water. Do not reuse the container. The
container must not be disposed of in the environment.

Characteristics: The preparation "NYMΦH" is an
innovative product used to combat juvenile
mosquitoes in stagnant and swampy waters.

"NYMΦH" acts in a natural-mechanical way, ensuring
effectiveness for up to 4 weeks. It is based on fast
biodegradable vegetable oil and is free of silicone. Its

use does not significantly change the values of water,
such as: temperature, pH and dissolved oxygen,
therefore it does not alter the natural conditions
necessary for the survival of the existing aquatic fauna.
It does not contain insecticidal active substances.

"NYMΦH" is suitable for use in stagnant, swampy and
dirty waters that are an excellent habitat for
mosquitoes, such as: Sewers, drains, wells, water
collection plates, buckets, tires, gutters, water tanks
and septic tanks.

"NYMΦH" is a ready-to-use liquid, which when
applied to the surface of the water quickly creates a
thin film that prevents the growth of mosquitoes in the
young stages (larvae and larvae). It significantly
reduces the surface tension of the water, thus
impeding the respiration of larvae and larvae and
leading them to suffocation. In fact, due to the reduced
surface tension of the water, the larvae and larvae can
not adhere to the surface of the water to pump the
necessary oxygen from the ambient air. The low
surface tension also prevents mosquitoes from laying
eggs, because as soon as the adult females land on
the surface of the water they come in contact with the
membrane, are trapped and eventually sink into the
water.

Duration:
2 years from the date of production.

PACKAGES: 50cc / 1LT / 5LT
